Why LFP Batteries Outlast Alternatives

You know what's wild? The LFP battery lifetime in our latest solar farm project exceeded 6,000 cycles while maintaining 80% capacity. That's nearly double the lifespan of traditional NMC batteries. But why does lithium iron phosphate chemistry enable such durability?

Highjoule Technologies' field data reveals three key factors:

- Stable olivine crystal structure resisting degradation
- Lower operating stress through flat voltage curves
- Reduced thermal runaway risks (DT
